A "larger than life" creation by Philippe Starck

Inventive and surprising, Philippe Starck has created speakers reflecting his genius and personality exclusively for Parrot. Their stunning, ultra-modern sculpted shape incorporates advanced technology that delivers an intense and powerful sound with spectacular clarity. From Tokyo to Mexico and from Paris to New York, Philippe Starck turns everyday life upside-down, from urban and prestigious architecture to our very own bathrooms. Find all the amazement of a Starck invention in your living room.

The magic of wireless

From *Bluetooth* to Wi-Fi, the Parrot speakers by Starck stand on the cutting edge of the new wireless technology. At last, relive the music stored on your PC by transferring it to the speakers by Wi-Fi. Stream your music in style from your cell phone via *Bluetooth*.

Complete iPhone / iPod compatibility

Discover the perfect combination of your iPod/iPhone and these impressive speakers. The Parrot speakers by Starck have been designed for compatibility with your iPhone and the latest generation of iPod and iTouch. By placing your device in the docking station built into one of the columns, you can listen to your favorite music while recharging it. Control your speakers and iPhone from the comfort of the sofa using the intelligent remote control.

Incredible room-filling sound

What makes the Parrot by Starck speaker system special is that you will be spellbound by its incredible sound. Regardless of the size of your room or the position of the speakers, the sound will adapt to the acoustics. A 100W power output will immerse you in an unrivalled, crystal-clear sound. A down firing woofer in the bottom of the each bass reflex enclosure generates deep satisfying low frequencies. Discover the NXT* technology which revolutionizes the acoustic design: a flat panel membrane exciter reproduces mid and high frequencies with amazing directivity and accuracy.

Send them all your music

The Parrot speakers by Starck give a thrilling sense of realism to any music you are listening to. Whatever the source, the speakers will bring out the best in your music with the greatest fidelity. Whether from your PC, Mac, iPhone or MP3 player, you'll want to listen to all your playlists again. You will never... You will never grow tired of discovering the wide range of different uses available.

Wireless technology

Wi-Fi
Wi-Fi is a wireless computer network technology that lets you operate an indoor broadband network. It can be used to connect communicating devices together and exchange data. Thanks to Wi-Fi, it is possible to create local networks and to connect so any type of peripheral with a high-speed connection at a distance of several tens of metres.

Bluetooth
Bluetooth wireless technology enables voice and data to be sent via a short-distance radio link. It connects a wide range of electronic equipment without requiring additional cables. Furthermore, it extends the communication possibilities for mobile phones and a large number of devices. The *Bluetooth* stereo (A2DP) profile uses the same radio frequencies and can be used to send music tracks from one device to another.

NXT*
NXT* is an innovative technology in acoustic design. It uses a very flat membrane, panel which vibrates and disperses a very broad sound field. So the NXT* technology gives an incredible flexibility of location in the room.

Phone and device compatibility

Parrot products are 100% *Bluetooth* compatible and are therefore compatible with almost every *Bluetooth* stereo (A2DP) designed to be cell phone. Visit www.parrot.com to see a complete compatibility list.
