STARCK BY WARENDORF:

“Tower” design with flexibility

Philippe Starck refers to his “towers” as the secret ingredient of his design combinations. This is where kitchen design is turned completely on its head by reducing it to just two towers and a functional table. The “hot” and “cold” tower units have a footprint of just 95 x 95 cm each and a height of 2.3 m. They rotate through 340° and constantly change the way the room looks depending on whether a chalk board, a wine rack or a flat screen television is integrated into the rear wall. The hot and cold appliances are integrated behind the tall unit doors. Next to them is additional storage space comprising specially designed shelves, crockery racks and food storage. Seine „Towers“ bezeichnet Philippe Starck selbst als „Würze“ seiner

Here the functional table is set up as a work and dining island with the creative hob and sink combination at one end and the worktop and dining area at the other. It is supported by the trademark Philippe Starck trumpet feet.
